

Thank you for reaching out to CanceRX, for an online expert opinion for assessing your treatment options.

Your case summary has been reviewed by a medical oncologist, of repute whose credentials have shared at the end of the report.

We have asked the following questions on your behalf.

- 1.Opinion on surgery
- 2.What is recommended at this time: chemotherapy or an alternate treatment?

The medical oncology opinion is summarized as follows:

Patient Name

Patient Age

Diagnosis:

The patient has carcinoma of Appendix

Surgery: Removed in piecemeal, without using isolation bag.

The possibility of spillover cannot be ruled out, hence making it high risk.

Rx: Patient would benefit from chemotherapy

FOLOFOX: Every 2 weeks for 12 cycles

or

CAPOX: Every 3 weeks x 8 cycles

Advised: Ovum preservation due to age

Review post-chemotherapy.
